

## THE SCIENTIFIC METHOD

Good theories  
are those capable  
of being disproved, Karl  
Popper says. Like  
that if I come  
next week,  
at the same time, sit  
over my coffee  
just exactly  
there  
where I looked up  
and observed  
you,  
looking at me,  
that I will find you,  
again,  
there,  
and this time  
have the courage  
to smile.
